

NOISE LEVELS OF SOME COMMON CONSTRUCTION EQUIPMENT

More than half a million road construction workers are exposed to potentially hazardous high noise levels, which is why noise reduction and noise cancellation solutions need to be implemented in the construction industry.

Construction Workers need to wear Hearing Protection around Power Equipment and Tools

The severity of noise exposure can result in hearing damage or hearing loss for construction workers not wearing the proper hearing protection. Furthermore, the majority of workers in the construction industry have a critical requirement to communicate with other workers to avoid accidents.

Noise Cancelling & Communication Headsets for Construction Industry

Sensear has a wide range of Smart Digital Headsets and Earplugs for hearing protection and enhanced communications in noisy construction work environments.

Features

Clear two-way radio Communication

Wireless / Bluetooth

360° Situational Awareness

Face-to-Face Communication

Intrinsically Safe

Volume Limiter
